DRONES AT COUVENT DES JACOBINS!

Couvent des Jacobins is delighted to unveil its latest video of the domaine.

The team of Drone of Visuals came several times at the estate to shoot the historical buildings and gardens of Couvent des Jacobins, its *chai*, its underground caves, and its unique location at the heart of Saint-Émilion. The team also captured images and videos of the 2019 harvests at Couvent, grape cutting, transportation of the *cagettes* to the center of the village, the sorting, gravity-based vatting, pump-overs, and the life, almost secret, of berries after the harvest.

Shooting with drones enabled Drone of Visuals to obtain unique views of the domaine, from the Plateau plots at heights exceeding 50 meters to shoots in the underground cellar with heights of barely 2 meters. This revolutionary technique permitted beautiful effects of perspective and movement.

You can watch the video by clicking [here](#). We selected Erik Satie's "Gymnopédie Numéro 1" on the piano to accompany the film. That beautiful music piece literally suspends time, a feeling similar to the one that one gets after a visit at Couvent des Jacobins.

Drone of Visuals specializes in drone-based shooting. Among their creations is a superb video of Château de Chenonceau from the sky. We would like to extend our warm thanks to the team for their professionalism.
